01

Growth Strategy

Demonstrating the true value of the Sumitomo Corporation Group through the integrated promotion of the Business Portfolio SHIFT and enhancement of sustainability management
We will achieve sustainable growth by promoting a growth strategy based on sustainability management.

Promoting the Business Portfolio SHIFT to enhance earning power

In FY2021, the first year of SHIFT 2023, we achieved record-high consolidated profit for the year attributable to owners of the parent of ¥463.7 billion by making progress on some measures for exiting low-profitability businesses, promoting turnaround, and creating value at a faster pace than initially planned. Some impact from the external environment, such as rising mineral resource prices, was included but we see this as the result of steadily implementing the measures set forth for structural reform at each business. We also made steady progress on turnaround projects, including the Ambatovy Project nickel mining and refining business in Madagascar, the TBC retail and wholesale tire business in the United States, and the Fyffes fresh produce business in Europe and the Americas. There is a solid sense of a recovery in earning power.

On the other hand, we will need to work on some initiatives from a medium- to long-term perspective, such as those to secure profitability commensurate with invested capital in all businesses, to expand our earnings base while increasing invested capital, and to create new core businesses that will drive future profit expansion. It is important that we produce results as quickly as possible, and I will put even more effort toward that end.

Utilizing knowledge cultivated on the job site in the promotion of SHIFT 2023

Up to now, I have been involved in various real estate businesses in Japan and overseas. Most recently, I have been working on businesses that are relatively close to the consumer, such as managing healthcare and retail in the Living Related & Real Estate Business Unit.

In the real estate business, which is also the founding business of the Group, we have continuously evolved the business model in response to the changing economic conditions and social structure of the times. In the healthcare and retail businesses, we are working on various businesses with a strong focus on development of regional societies and economies and improvement of standards of living, which are the Group’s key social issues.

I had worked in the sales field all my life but starting from this fiscal year I am serving as Chief Strategy Officer (CSO), leading the execution of the management strategy. I consider it my mission to take advantage of my experience on the front line of business to complete SHIFT 2023, tying that into the creation of new value further down the road.

The basis of our SHIFT 2023 plan is structural reform in order to shift our business portfolio to have both high profitability and resilience. To achieve that, it is essential that we enhance our businesses, leveraging the strengths of the Group, and create new businesses to address changes in the social structure. We will pursue sustainable growth by promoting a growth strategy through the planning and implementation of specific action plans.

Progress in strategy category

With regard to SBUs falling under the Value Creation category, we were able to make steady progress on turnaround projects such as Ambatovy, TBC, and Fyffes as mentioned above, which contributed significantly to a recovery in performance in FY2021. We will continue to execute the Value Creation plans established for each business.

In the Steady Business Growth category, we are working to further expand the scale of our business by investing additional capital in fields where we possess strengths, including increasing our construction equipment rental assets in the United States, entering the telecommunications business in Ethiopia, strengthening collaboration in the retail business, and accelerating the development of our healthcare business. We are also working on transformation of our business model utilizing DX to grow our earning pillars. Although uncertainty is increasing in the external environment with...
the emergence of geopolitical risks and global inflation, we will thoroughly manage the risks and execute planned investments while observing the changes. In the Seeding category, we will accelerate our commercialization efforts in 5G, Beyond Mobility, and Sustainable City (Smart City) with a view to resolving key social issues and long-term market growth.

With regard to the Divestment category, we are carrying out asset replacement ahead of schedule, including selling part of our fossil energy concession, and working to recover more management resources than set forth in the plan.

Creating and cultivating next-generation businesses with enhanced sustainability management as the driving force

In order for the Group to grow sustainably, we will need to promote businesses that capture the essence of the value demanded by society. To that end, it is important to embody the idea that “benefit for self and others, private and public interests are one and the same” * as set forth in Sumitomo’s Business Philosophy. This value has been passed down and is found within the current Sumitomo Corporation Group’s Management Principles. It is also the concept that lies at the foundation of the Group’s sustainability management. Based on this thinking, we are working on various activities under the theme of enhancement of sustainability management.

Further enhancing sustainability management

Various social issues, including climate change, loss of biodiversity, depletion of natural resources, and human rights issues, are becoming more serious and threatening the sustainability of society. There are growing expectations for companies to resolve social issues, and I get a strong sense that the business environment and business rules are changing significantly in conjunction with this. These changes are irreversible, and while it is necessary to address the risks associated with the increasing seriousness of social issues, the situation has brought about many business opportunities to meet new social needs. Given these times we are in, with the pursuit of sustainability as the cornerstone of growth strategy, the Group aims to enhance corporate value over the long term by strategically reallocating management resources and executing the Business Portfolio SHIFT toward the creation of value demanded by society.

The Group is focusing on the six key social issues and long-term goals established in June 2020, which are based on the idea of balancing “development and evolution of society” with “sustainability of society.” We also established medium-term goals in May 2021 as our specific action plan.

In accordance with these goals, we will continue to review our policies as climate change mitigation needs are changing at an increasingly faster pace. In February 2022, we made it clear that we will not be involved in any new coal-fired power generation business, neither in independent power producer (IPP) nor engineering, procurement, and construction (EPC), with no exception. In May 2022, we disclosed a more specific milestone for achieving carbon neutrality by 2050. As a specific initiative, in FY2021 we sold part of our fossil energy concession and pushed steadily forward with the Business Portfolio SHIFT for decarbonization. At the same time, we began studies on decarbonization and low-carbonization for our existing coal-fired power generation businesses. We are also working on carbon neutralization of our business, and in the Energy Innovation Initiative (EII) launched in April 2021, we will contribute to the carbon neutrality of society through the creation of next-generation energy businesses.

Moreover, in terms of fundraising, we established a green financing framework in March 2022 and issued green bonds in May in the same year.

In the area of circular economy, we are promoting recycling, resource-saving business through the expansion of sharing businesses on top of reducing food waste and developing biochemicals. In addition, as part of our efforts to reinforce the sustainable procurement system for major natural resources, we established and disclosed the Sumitomo Corporation Group Forest Management Policy and the Sourcing Policy for Forest Products in March 2022.

In regard to respect for human rights, which is a subject of worldwide interest, we have begun human rights due diligence in each business unit based on the Sumitomo Corporation Group’s Human Rights Policy established in 2020, and plan to complete the work in all business units by 2025.

Creation and cultivation of next-generation businesses

Under SHIFT 2023, we see demands for the realization of a sustainable society as opportunities from a long-term perspective, and have positioned the fields we can work on while demonstrating our strengths as next-generation growth fields. We have identified business opportunities in five fields, namely social infrastructure, retail/consumer, healthcare, and agriculture in addition to the aforementioned energy innovation. While utilizing DX, which has the potential to transform existing business models, we are working on new developments and creating core businesses that will be the Group’s cornerstone in the future. These efforts will also contribute significantly to the key social issue of “development and evolution of society.” Several projects are already underway in the fields of agriculture, healthcare, and retail/consumer, increasing the feasibility of the strategy. We have also launched efforts for the generation of synergy transcending business units and anticipating a larger market.

None of these efforts will be accomplished overnight, but we will actively engage in discussions based on awareness of making changes that go beyond the framework of the organization, which has dramatically increased under SHIFT 2023. While keeping close tabs on the two major social trends of requirements for sustainability and digitalization, we will take the lead in transition and strive for the realization of a sustainable society and the sustainable growth of the Group.
Sumitomo Corporation Integrated Report 2022

Medium- to Long-Term Growth Strategy

Key social issues and medium- and long-term goals

As part of enhancing sustainability management, the Company has identified six key social issues to be addressed. We have established medium- and long-term goals for each of the issues and aim to resolve them.

<table>
<thead>
<tr>
<th>Key social issues</th>
<th>Long-term goals</th>
<th>Medium-term goals</th>
<th>Progress</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development of local society and economy</td>
<td>Contribute to development of local industries and human resources</td>
<td>Develop local industries, create jobs, and develop human resources through the Group's global business operations</td>
<td><em>Reduce CO2 emissions of the power generation business by 40% or more by 2035 (of which reduce 60% or more for coal-fired power generation business), generation portfolio in 2035 to comprise 20% coal-fired, 50% gas-fired, and 30% renewables</em></td>
</tr>
<tr>
<td></td>

</tr>
</tbody>
</table>

Note:
- *1 As of 2020: Coal 50%, gas 30%, renewables 20%.
- *2 Indirect CO2 emissions generated by others with the use of fossil fuel.
- *3 Contribute to CO2 reduction by setting targets for individual businesses.
- *4 As of 2020: 1.5GW (10GW if 1 billion W).
- *5 A process that employees, local residents, or other stakeholders can use to lodge complaints regarding human rights violations and other issues related to enterprise’s business activities including its supply chain, for resolving such issues.
- *6 Social contribution activity program with employee participation at the Sumitomo Corporation Group.
Focus

Taking up the challenges of the EII

Q. Please tell us about the background and aim behind the establishment of the EII.

A. With increase in global population and economic growth, energy demand continues to grow, while climate change has become an urgent issue to be addressed on a global scale. At the 27th United Nations Climate Change Conference (COP27), which will be held in Egypt in November 2022, discussions will likely take place on global initiatives to achieve the 1.5°C target, with an awareness of the issue of energy and food security, the importance of which has been reaffirmed following Russia’s invasion of Ukraine. In 2020, we identified mitigation of climate change as one of our six key social issues. We established the EII in April 2021 to resolve that issue. The EII is a new business organization that transcends the framework of traditional segments. We consider the changes in social structure brought about by the energy transition as a major business opportunity, and achieving a carbon-neutral society through decarbonization and recycling energy system is the main theme of our efforts. It is positioned within the Seeding strategy category in which we aim to cultivate next-generation businesses from a medium- to long-term perspective, and we are working on the creation of the next-generation businesses with a scale commensurate with the business segment. Initially, the organization and team members promoting business in the next-generation energy field in each business unit were brought together from the perspective of companywide optimization to form the EII, and it started out with around 100 members. In April 2022, we began putting together a global EII structure organization, and are currently designing and creating innovative businesses with a staff of approximately 200.

Q. About a year and a half has passed since the launch of the EII. Please tell us about the activities and progress during this period.

A. The first thing we worked on after the launch was putting together the grand design for the decarbonization and recycling energy system that we seek to create. What should the future energy systems be in order to realize carbon neutrality? Rather than focusing and working on a part of the energy value chain by itself, we took a broad perspective of the entire energy value chain and identified three focused areas. The first is developing carbon-free energy, in which we aim to develop large-scale supply-driven systems such as hydrogen, ammonia, and next-generation bio-energy. The second is expanding power & energy services, in which we propose a local production for local consumption model and energy management utilizing distributed power sources and energy storage technology. The third is CO2 capture, storage and utilization, in which we aim to create value through carbon management, including utilization of our extensive assets and our technology in other innovation fields. These three focused areas do not exist independently of each other but rather are interrelated. We believe that new synergy and demand will be created only when these are combined. For that reason, we are also pursuing synergy with existing businesses inside and outside the EII, including other business segments. In addition, going beyond the EII, to promote businesses in the next-generation energy field throughout the Company, we have launched and are implementing cross-organizational collaboration platforms between different organizations by theme, such as zero-carbon steel and Carbon dioxide Capture, Utilization and Storage (CCUS), which is a technology for utilizing CO2. First, we will consolidate information in the next-generation energy field from the entire Company and accelerate discussions on commercialization and systematization. The EII has been striving to discover new businesses through cross-company, cross-functional activities while also working on business expansion and development centered on the three focused areas and business lines. As a result, many projects are underway at our work sites. Although there are still many things we cannot present outside the Company, we will continue to work on value creation through next-generation businesses that contribute to the achievement of a carbon-neutral society.

Q. What are the strengths of the EII in promoting these efforts?

A. The Group has close relationships with various industrial sectors through its existing businesses. The needs and challenges along the way to carbon neutrality and the related business opportunities are inherent in all of these industrial sectors, customers, and markets. To what extent we can capture both the demand from this already existing and latent demand and tie it into business will be of importance, and the key to achieving that is the process of creating businesses in the field of next-generation energy by cross-organizational collaboration. Building the EII as a mechanism for realizing that potential, the EII is a business organization with the responsibility of turning a profit like other businesses, but its focus is on creating new next-generation businesses to develop future earning pillars from a medium- to long-term perspective rather than on pursuing short-term returns. This is precisely why we continually consider overall optimization and pursue synergy through collaboration not only within business segments but also with external organizations. In other words, we are expected to provide and demonstrate cross-functional capabilities. A typical example of this is the aforementioned platforms for cross-organizational collaboration.

Shingo Ueno

Medium- to Long-Term Growth Strategy
Medium- to Long-Term Growth Strategy

Focus: Taking up the challenges of the EII

In SHIFT 2023, the EII falls under the Seeding strategy category, or taking on structural changes in society from a medium- to long-term perspective. What is the strategy for the future?

A. We are already proceeding with many projects for the future. First, we are working on further cash generation and improving the return on invested capital (ROIC) in existing business lines with ongoing operations such as forests and biomass trading. At the same time, many of the projects at the EII are in the technical demonstration or social implementation stage, and in new fields such as these, our aim is to contribute to profits through commercialization either during or after the period of the next medium-term management plan. Progress must be monitored while maintaining awareness of this timeline, so the EII has categorized all businesses into three stages and is implementing a PDCA cycle. Specifically, projects in the field testing and technical verification stages are categorized into the “exploratory stage,” those in the social implementation stage into the “pioneer stage,” and businesses and projects that have already been commercialized into the “growth/expansion stage.” Under SHIFT 2023, the companywide portfolio allocation for capital invested in creating next-generation businesses is around 10% for the exploratory stage, 60% for the pioneer stage, and 30% for the growth/expansion stage. We plan to focus on accumulating quality projects through the development and verification of hypotheses for the next medium-term management plan. We will then take appropriate measures according to the stage, establish KPIs and KAs according to the purpose of each stage, and steadily implement them through a PDCA cycle. As a result, we aim to establish an earnings base similar in scale to a business unit by 2030. Rather than simply pursuing economic value, we will work toward the vision of achieving a carbon-neutral society. To that end, for example, we are looking into visualizing and measuring the contribution to CO2 reduction through the businesses worked on by the EII and the services provided and establishing quantitative targets for it.

Q. Lastly, what is your outlook for the future?

A. The EII is an organization with a vision of achieving a carbon-neutral society through a decarbonization and recycling energy system that reduces environmental impact and creates business value at the same time by pursuing initiatives that bring internal and external parties together to cover the entire energy value chain. Please continue looking forward to the future of the EII.

Carbon neutrality, it is said that a massive investment on clean energy of approximately 4.5 trillion U.S. dollars per year will be required by around 2030. As mentioned earlier, geopolitical risks have arisen in relation to fossil fuels, stemming from the Russia-Ukraine situation in early 2022. Changes are taking place in the environment surrounding us on a scale and at a pace beyond what we anticipated. Looking ahead, uncertainty will only increase, and the changes will become even more extreme. It is in times such as these that the EII must bear in mind a grand design to plan and develop businesses from a long-term and broad perspective without getting hung up on the changes happening in front of us. We already have the necessary elements and strengths. Putting these together, we will take up the challenge of proposing and developing business models to contribute to resolving issues facing society and customers. Designing and creating innovative businesses is truly the mission of the EII. Our aim is to build a sustainable decarbonization and recycling energy system that reduces environmental impact and creates business value at the same time by pursuing initiatives that bring internal and external parties together to cover the entire energy value chain. Please continue looking forward to the future of the EII.
The grand design of the decarbonization and recycling energy system that we seek to create, which provides a bird’s-eye view of the entire value chain, is shown below. It covers many elements, from production to consumption, but rather than existing independently of each other, they are interrelated, forming a single energy system. We will continue to leverage cross-organizational collaboration and our global network, which are strengths of the Sumitomo Corporation Group, to promote each project.
Implementing specific actions to contribute to carbon neutrality

Basic approach to climate change issues
Mitigation of climate change is a serious issue that must be overcome if we are to realize a sustainable society. Global initiatives for the early achievement of a carbon-neutral society are accelerating. The Sumitomo Corporation Group places great importance on the global agreement in the Paris Agreement, and we seek to contribute more actively to the achievement of the carbon neutrality targets for society set forth in the agreement. In 2019, the Board of Directors decided on the Group’s Policies on Climate Change Issues to clarify the role we are to play in overcoming climate change issues. We continue to review these policies in light of global circumstances surrounding climate change.

Policies on Climate Change Issues

Basic Policy
- Aim to make the Sumitomo Corporation Group carbon neutral in 2050*. Develop technologies and business models for creating a sustainable energy cycle by reducing CO2 emissions and achieving negative emissions*2 for society as a whole.
- In addition to reducing and absorbing CO2 emissions from our business, we will contribute to the carbon neutralization of society through cooperative initiatives and recommendations made with business partners and public institutions.

Policy on Business Activities
- Promote renewable energy, efficient energy utilization and fuel conversion that contributes to reducing CO2 emissions throughout society. We will also work to offer new energy management and mobility services utilizing renewable energy and also to materialize hydrogen technologies and applications.
- In the power generation business, we provide a stable supply of the energy, essential for the economic and industrial development of local communities. At the same time, we continuously shift management resources to renewables and other energy sources with low environmental burden in the power generation portfolio. (In 2035: 20% for coal-fired, 50% for gas-fired, and 30% for renewables in terms of net ownership generation capacity)*3
- Regarding the development of thermal power generation and fossil energy concession, we will work on the premise of carbon neutralization in 2050. We will not be involved in any new coal-fired power generation business neither independent power producer (IPP) nor engineering, procurement, and construction (EPC). For IPP business, we aim to reduce CO2 emissions by 60% or more by 2035 (compared to 2019) and we will end all the coal-fired power generation business in the late 2040s. We will not make any further investment in the thermal coal mining interest and aim to achieve zero production from thermal coal mines by 2030.

Carbon neutrality at the Sumitomo Corporation Group
Sumitomo Corporation has set forth achieving carbon neutrality within the Group by 2050 as a long-term goal. As shown in the diagram below, we have established specific milestones for reducing CO2 emissions in order to achieve the goal. In FY2021, we sold some of our interests in the fossil fuel upstream business and pushed forward with the portfolio shift through promotion of the renewable energy business. At the same time, we began studies on how to promote decarbonization and low-carbonization for our existing coal-fired power generation business.

By clarifying milestones for achieving carbon neutrality, we will develop next-generation energy businesses for the growth and evolution of regional society as well as for achieving carbon neutrality within the Group, thus contributing to realizing carbon neutrality in society.

Policy on and approach to our coal-fired power generation business

Sumitomo Corporation Policy
- No involvement in any new coal-fired power generation business, neither in IPP nor EPC, without any exception
- End all coal-fired power generation business by the late 2040s

Approach to Efforts
- From the perspective of our social responsibility, including the development of local communities and economies and our obligation to supply, we will pursue every option, not eliminating the possibility of accelerated withdrawal from the business, while implementing the following efforts to accelerate the decarbonization of our company and society as a whole.
  - Consensus building based on sincere dialogue with host countries, local communities, and other stakeholders
  - Pursuit of consideration and efforts toward the decarbonization and low-carbonization of existing facilities
  - Maximum support for host countries to shift power sources to renewable energy and other sources

Milestones for Reducing Emissions to Achieve Carbon Neutrality (Millions of tons of CO2e)

*1 The scope of business targeted for carbon neutralization is as follows.
(Scope 1 and Scope 2) Direct CO2 emissions from Sumitomo Corporation and its subsidiaries, as well as indirect CO2 emissions from the generation of energy used by each company; however, for the power generation business, emissions from these affiliated companies under the equity method are also included.
(Scope 3) Indirect CO2 emissions associated with the use of energy resources produced by fossil energy concession of Sumitomo Corporation Group, its subsidiaries, and affiliated companies under the equity method. Carbon neutrality means net-zero CO2 emissions that combine CO2 emissions from our business and our contributions to CO2 emission reduction.
*2 Negative emission refers to the absorption, capturing, and removal of CO2 emitted in the past and accumulated in the atmosphere.
*3 As of 2020: Coal 50%, gas 20%, renewables 20%
*4 By means recognized by international standards such as capture and storage by forests and other technical methods.
**Mitigation of climate change**

**Scope of carbon neutrality efforts at the Sumitomo Corporation Group for 2050**

With regard to the scope of carbon neutrality within the Group, in addition to Scope 1 and Scope 2 CO2 emissions at Sumitomo Corporation and its consolidated subsidiaries (approx. 1 million tons*1), we also include the CO2 emissions of the power generation business, which emits a large portion of those emissions (approx. 41 million tons*1,2), including associated companies (equity method), and Scope 3 indirect CO2 emissions generated by other organizations with the use of fossil fuel in the fossil fuel upstream business (approx. 13 million tons*3).

*1 Figures are from 2021 results.
*2 Includes CO2 emissions from the power generation business (approx. 1 million tons) at Sumitomo Corporation and its consolidated subsidiaries.

Note: Advice has been received from a third-party agency for calculation of the results for operational projects in the power generation business and for the fossil fuel upstream business.

*3 Includes facilities under construction.

**Disclosure based on the TCFD**

Recognizing the importance of disclosing information related to our initiatives to address climate change issues, we have been supporting the final recommendations of the Task Force on Climate-related Financial Disclosures (TCFD) since March 2019. We established medium- and long-term goals for mitigating climate change as a key social issue. In compliance with the framework recommended by the TCFD, including efforts such as reviewing Policies on Climate Change Issues, we disclose relevant information on governance, strategy, risk management, and metrics and targets on our corporate website and in our ESG Communication Book.

In addition, we are working to further enhance information disclosure through opportunities for dialogue, such as ESG briefings.

**Goverance**

With regard to the various opportunities and risks related to climate change issues involved in the Group’s diverse business activities, the Board of Directors reviews periodic reports on strategies in the Group’s diverse activities in each business field, their progress, and the status of risks affecting the Company’s entire business portfolio, and discusses the handling of important issues related to policies on responses to climate change issues. As an example, the Management Council repeatedly discussed the path to achieve the Group’s long-term goal of “becoming carbon neutral in our business activities by 2050 and taking on the challenge of realizing a sustainable energy cycle,” the Policies of our power generation and energy-related businesses, and the initiatives necessary to realize a carbon-neutral society. Based on this, the Board of Directors reviewed the Policies on Climate Change Issues and resolved the medium-term goals for Climate Change Mitigation.

**Risk Management**

Our Group’s activities cover businesses across a broad range of fields and regions, and involve various social issues. We always attach great importance to these social issues, and in order to appropriately control the social and environmental impact of the entire Group’s business activities, establish policies such as the Environmental Policy, Human Rights Policy, CSR Action Guidelines for Supply Chain Management, Anti-Corruption Policy, and Compliance Guiding Principles, and publicly and thoroughly enforce them within the Group. With regard to the handling of the risks of climate change, each business unit assesses the introduction of regulations and market changes for related business sectors and conducts business activities, and as a part of companywide portfolio management, the Corporate Sustainability Department summarizes the status of major risks to the Group, taking into consideration global effects relating to climate change and regulatory trends. The results are periodically reported to the Management Council and the Board of Directors. If there are any unacknowledged risks from the perspective of the portfolio as a whole, measures including reduction of exposure are investigated with organizations responsible for risk management.

**Metrics and Targets**

We have established the targets for the Group toward achieving carbon neutrality by 2050 as described on the previous page.
Medium- to Long-Term Growth Strategy

Respect for human rights

Ascertain human rights risks in all of our businesses and supply chains and promote continuous improvement

Our approach to respect for human rights

Through the implementation of human rights due diligence, stakeholder dialogue, internal education, and other such efforts based on the Sumitomo Corporation Group’s Human Rights Policy established in May 2020, the Group strives to demonstrate respect for human rights as part of its corporate social responsibility and achieve sustainable growth together with society.

Long-term goals
- Respect human rights through all of our businesses and supply chains
- Promote and ensure respect for human rights in accordance with the United Nations Guiding Principles on Business and Human Rights and Sumitomo Corporation Group’s Human Rights Policy
- Ensure a safe workplace environment
- Achieve a diverse organization grounded in mutual respect

Medium-term goals
- Carried out human rights due diligence for two business units
- Cybersecurity business: Conducted assessment of human rights risks in conflict situations

Medium- and long-term goals
- Thoroughly instill respect for human rights
- Achieve a diverse organization grounded in mutual respect

Progress in FY2021

For further details on initiatives concerning ensuring a safe workplace environment and achieving a diverse organization grounded in mutual respect, please see our ESG Communication Book. https://www.sumitomocorp.com/en/jp/sustainability/report

Sumitomo Corporation Group’s Human Rights Policy

Sumitomo Corporation declares in its management principles that it aims to be a global organization that contributes broadly to society and places prime importance on utmost respect for the individual.

We will respect human rights to fulfill our corporate social responsibility, and pursue sustainable growth with society. Sumitomo Corporation became a signatory in 2009 to the Ten Principles of the United Nations Global Compact, which advocates for values common to its own management principles, including those regarding human rights and labor. We also respect the International Bill of Human Rights and the International Labour Organization’s Declaration on Fundamental Principles and Rights at Work, and we operate in accordance with the United Nations Guiding Principles on Business and Human Rights.

We will respect human rights to fulfill our corporate social responsibility, and pursue sustainable growth with society. Sumitomo Corporation became a signatory in 2009 to the Ten Principles of the United Nations Global Compact, which advocates for values common to its own management principles, including those regarding human rights and labor. We also respect the International Bill of Human Rights and the International Labour Organization’s Declaration on Fundamental Principles and Rights at Work, and we operate in accordance with the United Nations Guiding Principles on Business and Human Rights.

1. Scope of application: Sumitomo Corporation endeavors to ensure that all executives and employees within the Group fulfill their responsibility to respect human rights. In addition, we encourage our suppliers and business partners to accept, understand, and practice this policy so that we can work together to fulfill our social responsibilities, including respect for human rights in the relevant value chain.

2. Human rights due diligence: Sumitomo Corporation strives to identify and prevent/mitigate any adverse impact on human rights through the application of human rights due diligence processes. Where we identify that our Group’s practices have caused or contributed to an adverse impact on human rights, we will endeavor to take appropriate remedial measures.

3. Compliance with relevant laws: Sumitomo Corporation will comply with national and regional laws and regulations applicable to its group operations. When those laws and regulations are incompatible with internationally recognized human rights, we will seek to employ measures to respect international human rights norms.

4. Stakeholder engagement: Sumitomo Corporation will seek to improve and progress human rights measures through engagement and dialogue with relevant stakeholders.

5. Education: Sumitomo Corporation will appropriately educate its executives and employees within the Group in order to ensure that this human rights policy is understood and implemented effectively.

6. Reporting: Sumitomo Corporation will disclose appropriate information regarding its efforts to respect human rights.

Promotion of human rights due diligence with respect to all businesses

Based on the Sumitomo Corporation Group’s Human Rights Policy, we began human rights due diligence in 2020 so that we can identify, prevent, mitigate, and account for how we address any adverse human rights impact that the Group’s business activities may contribute to. Our human rights due diligence is carried out via a process in line with international guidance such as the United Nations Guiding Principles on Business and Human Rights and the United Nations Guiding Principles Reporting Framework. We also identified salient human rights issues that should be prioritized in order to evaluate the impact on human rights within the Group and the related risks. Specifically, we have positioned the following as material issues: freedom of association and the right to collective bargaining, forced labor and child labor, discrimination and harassment, labor conditions, occupational health and safety, health and safety of local residents, land rights, and personal information and privacy. These are also related to the four core labor standards of the International Labour Organization.

FY2021 results and future initiatives

In FY2021, we expanded the scope of due diligence to all businesses in accordance with the medium-term goal to assess human rights risks in all businesses, including supply chains, and implement measures to mitigate risks by 2025. As part of these efforts, we identified and assessed human rights risks in the Media & Digital Business Unit and the Living Related & Real Estate Business Unit. In each of these business units, we confirmed that specific measures have already been taken such as supplier surveys and improvement activities to address human rights risks of concern in light of the business characteristics based on the products and regions. We also recognized latent human rights risks in each business and tied this into consideration of countermeasures. We will continue to work on human rights due diligence along with internal education activities such as implementing human rights education programs for all executives and employees, dialogue with stakeholders, information disclosure, and other initiatives.

Human Rights Due Diligence / Process of Identification of Salient Human Rights Issues

Identification of eight salient human rights issues

- Freedom of association and the right to collective bargaining
- Forced/child labor
- Occupational safety and health
- Health and safety of local residents
- Land rights
- Discrimination/harassment
- Privacy of personal information
- Working conditions

Identification and assessment of human rights risks and impacts
- Desktop survey
- Interviews of experts on business and human rights
- Interviews with all SBUs by department
- Identification of priority business units*

Prevention and mitigation of human rights risks
- Incorporation in risk management systems of each SBU/business

Reevaluation of human rights risks
- Reevaluation based on efforts to prevent/mitigate human rights risks

Follow-up and monitoring
- Assessment of initiatives concerning human rights

Information disclosure
- Periodic disclosure of initiatives concerning human rights and their effects

* Also promote human rights due diligence in SBUs/businesses other than those identified in human rights due diligence by department.

We will meet the expectations of our shareholders by realizing stable profit growth over the medium to long term.

Status of and outlook for the medium-term management plan SHIFT 2023

Operating results and outlook
In FY2021, the first year of SHIFT 2023, we posted record-high consolidated profit for the year attributable to owners of the parent of ¥463.7 billion. In addition to our response to changes in the external environment, the effects of various measures set forth in the medium-term management plan, including structural reform, have begun manifesting. We will continue to steadily promote SHIFT 2023 in the second year and beyond with a sense of urgency.

At present, the COVID-19 pandemic continues to disrupt economic activity and, among other factors, the Russia-Ukraine situation that arose in February 2022 is creating chaos in the global economy. Mineral resource prices are hovering at historical highs, and the Russia-Ukraine situation in February 2022 is creating chaos in the global economy. Mineral resource prices are hovering at historical highs, and the semiconductor shortage and disruptions in the logistics network continue, making it difficult to put together an outlook. In addition, signs of inflation have begun to emerge worldwide, and the yen continues to depreciate due to such factors as differences in the monetary policies of central banks in each country. After careful review of the impact of these external environmental factors on our business, we are forecasting profit of ¥370 billion in FY2022 and aiming for ¥380 billion in FY2023 and ¥450 billion in FY2024. Although the situation is increasingly uncertain, we will continue to thoroughly promote the measures of SHIFT 2023 and put maximum effort into properly addressing the current changes in the business environment and realizing a portfolio that is both highly profitable and resilient.

Growth Strategy

New policy on return to shareholders

Overview and purpose
In FY2021, we made steady progress on enhancing profitability and our financial base by rebuilding our business portfolio. Under these circumstances, we renewed our policy on return to shareholders in FY2022. It is designed to maintain and enhance our traditional approach centered on dividends, namely that of providing “stable long-term dividends while aiming to increase dividends through medium- to long-term profit growth.”

Shareholder Return Policy

- The annual dividend amount will be determined based on the consolidated dividend payout ratio of 30% within the DOE range of 3.5% to 4.5%, taking into consideration the status of fundamental earnings capacity, cash flows, and other factors.
- If 30% of the profit for the year exceeds the above range, we will pay dividends or repurchase our shares for the excess portion in a flexible and agile manner.

The target range for dividends on equity (DOE) is 3.5% to 4.5%. DOE is equal to return on equity (ROE) multiplied by the dividend payout ratio, so assuming a dividend payout ratio of 30%, we must achieve an ROE range of 12% to 15%. Achieving medium- to long-term profit growth commensurate with this level of capital efficiency and increase in shareholders’ equity will contribute to sustainable growth of the Company and maximization of long-term profit for shareholders through increased return to shareholders and stock price. We will endeavor to make this happen by promoting the various measures of SHIFT 2023.

In addition, establishing a target range for DOE will raise the target minimum dividend, which had been set at ¥70, according to growth of shareholders’ equity while preventing substantial fluctuations in the amount of dividends. Through this, we hope to realize better long-term stable dividends and sustainable growth.
Message from the Chief Financial Officer

In FY2021, the annual dividend was set at ¥110 per share based on the previous policy of maintaining dividends of at least ¥70 per share, with a target consolidated payout ratio of about 30%.

Risk management, selective investment & strengthening of post-investment value creation

Enhancement of risk management from a macro perspective is another important issue. As part of the Framework SHIFT, we are working on various improvements to selection of investments and post-investment value creation. The primarily elements are the Investment Selection Guidelines established in FY2021, Investment Performance-linked Compensation, and Enhancement of Corporate Governance. The Investment Selection Guidelines categorize projects that should not be invested in based on a comprehensive analysis of the factors behind past large-scale investments falling short of plan or posting losses. Promoting understanding at the work-site level, when reviewing investments, we always check for applicable items referring to the Investment Selection Guidelines. If there are applicable items, we carefully discuss to what extent the risks can be eliminated to make the investment decision.

The purpose of Investment Performance-linked Compensation is to promote thorough discipline through an increased sense of ownership among the officers and employees in charge of new large-scale investments and commitment to achieving the business plans prepared when executing the investments. In FY2021, we introduced a system for general managers and above who are responsible for investments to be assigned exclusively to the investment for a certain period following execution. We also introduced a performance-linked compensation system corresponding to the investee’s plan for a certain period (around three to five years).

Regarding Enhancement of Corporate Governance, we are promoting the implementation of our Group Management Policy (GMP). The GMP sets forth three principles of group management, namely Jiritsu*, Dialogue, and Collaboration. As our group companies become more diverse and the markets and industrial structures go through major change, we are working to shift from the previous style of corporate governance in which the focus was that the Company substantially takes on the management role of the group companies to one in which the functions of supervision and execution are separated and further autonomy is promoted in management of group companies. We will promote the improvement of our corporate value by clarifying the management responsibilities of group company executives, expediting decision-making, and advancing discontinuous strategy planning and execution in anticipation of environmental changes. Group company boards of directors will carefully discuss growth strategies and business plans, and with the agreement of group company executives, we will monitor progress through management of KPIs and KAs. Moreover, the Board of Directors will design the systems for appointment and dismissal, evaluation, and compensation of executives, which are the key to corporate governance, and properly implement them.

Along with the importance of business management to realize the improvement of group value, human resources management has grown even more important to support it. We established the Talent Management Task Force to support the selection of management teams at individual group companies and provide them with training. We are also promoting various initiatives to expand human resources for management of group companies.

* Jiritsu is a Japanese term. In the GMP, we define it to mean “following the rules necessary for the management of a Sumitomo Corporation Group company, such as the Sumitomo Corporation Group’s management principles, strategies, and policies, to discipline oneself, to think, make decisions, act for oneself in order to achieve goals, and to be accountable to stakeholders.”

Message to our stakeholders

We believe we are making steady progress on the Business Portfolio SHIFT, Framework SHIFT, and Management Base SHIFT set forth in SHIFT 2023. However, we are still working on realizing a portfolio that is both highly profitable and resilient, which is the goal of SHIFT 2023, and we are aware that we have not yet reached a level of profit that will satisfy our stakeholders. We will not let up but will instead accelerate these three “shifts” and work on various measures to increase our capability to create value. We will present the process and results to stakeholders as we promote dialogue.
Steadily advancing the three “shifts” to bring SHIFT 2023 to completion

In FY2020, which was the final year of the previous medium-term management plan, the Group’s business performance deteriorated significantly due to drastic changes in the economic environment, and we made a concerted effort to push forward with structural reforms. The new medium-term management plan SHIFT 2023, which covers FY2021 to FY2023, continues that momentum. At the core of SHIFT 2023 is the Business Portfolio SHIFT. Reassessing all businesses by SBU, we will categorize them according to the four categories of Divestment, Value Creation, Steady Business Growth, and Seeding to transition to a business portfolio that is highly profitable and resilient. We will also promote a Framework SHIFT and a Management Base SHIFT to ensure the effectiveness of the Business Portfolio SHIFT. In FY2021, we continued to work on the three “shifts,” and are beginning to see steady results. We will continue to accelerate our efforts to bring SHIFT 2023 to completion.

### Business Portfolio SHIFT

**Strategy Category** | **Main SBUs** | **Initiatives**
--- | --- | ---
**Divestment** | Upstream of Fossil Fuel | • Sold part of our thermal coal mining interest in Australia and partially sold oil and gas business in the United Kingdom and North Sea.
Upstream of Metal Resources | • Sold part of our thermal coal mining interest in Australia and partially sold oil and gas business in the United Kingdom and North Sea.

**Value Creation** | Steel Products Business | • Enhanced management efficiency through rigorous structural reform and accelerated the cultivation of environmental responses and regional strategies.
Cable TV Business | • Strengthened main services (internet, video distribution, mobile phones).
Upstream of Metal Resources | • Expanding strip-related services (insurance services, online medical consultations, etc.).

**Steady Business Growth** | Leasing | • Increased prime assets and expanded business areas with a focus on global assets, real estate, environmental energy, etc.
Renewable Energy IPP | • Expanded renewable energy business in Japan and overseas.
Smart Infrastructure | • Started construction for onshore wind power project in Abukuma, Fukushima.
Domestic Real Estate | • Purchased additional equity stake in Indonesian geothermal power generation project.
Agriculture | • Accumulated prime assets mainly in strategic areas, and steadily implemented balance sheet (BS) management by utilizing external funds such as investment funds and real estate investment trusts (REITs).

**Seeding** | Tubular Business Development | • Expanded the renewable energy business in Japan and overseas.
Smart City | • Created high-value urban development by introducing smart services based on the needs of residents.
SG | • Promoted consultation on Smart City town management in northern Hanoi.
EII | • Started construction for onshore wind power project in Abukuma, Fukushima.

### Framework SHIFT

- Each SBU set objective indicators to measure the attainment of strategic targets (KPIs/KAIs), monitored the progress, thoroughly implemented a PDCA cycle to ensure the effectiveness of the plan, and enhanced awareness of our commitment.
- Introduced stricter investment discipline and an investment performance-linked compensation plan to improve the probability of successful business investment.
- Established the Energy Innovation Initiative (EII), which transplants the current framework of business units, for next-generation energy and enhanced companywide efforts.

### Management Base SHIFT

- The Board of Directors continuously monitored progress on SHIFT 2023 to enhance corporate governance. Also implemented the Group Management Policy, aiming to maximize the Group’s corporate value.
- Established the foundation for reform of human resources management, including by introducing a job grading system, revamping the evaluation system, and streamlining job positions by eliminating conventional position-based management. Also implemented various measures, including acceleration of global SBI and a human resources shift in conjunction with rebuilding the business portfolio, and promoted global allocation of the right talents to the right places.
Focusing on exiting from low-profitability businesses and improving profitability to create results in each of the four strategy categories

In monitoring of investment targets and support for execution (Full Potential Plan), we divested from unprofitable businesses while accelerating the improvement of profitability and efficiency of low-profitability businesses through measures to create value (hereinafter “turnaround”). Among the 101 companies that were classified as exit or divestment from approximately 400 companies that were analyzed prior to the establishment of SHIFT 2023, we exited from 32 companies in FY2020. In FY2021, we exited from 32 of the 69 remaining companies. In addition, measures taken by each work site have generated steady results for 76 companies classified as turnaround projects. In particular, we improved earnings of the nickel mining and refining business in Madagascar, the tire retail and wholesale business in the United States, and the fresh produce business in Europe and the Americas as a result of the review of the business strategy, managerial system, and operations of each business. As a result, the earnings improvement effect from exit, divestment, and turnaround projects was approximately ¥100 billion. As for improvement excluding external environmental factors, the initial plan of SHIFT 2023 (approx. ¥70 billion improvement) was achieved in the first fiscal year of SHIFT 2023. At the same time, looking at progress on the Business Portfolio SHIFT by strategy category, the freeing up of management resources steadily progressed in SBUs in the Divestment category. SBUs in other categories also promoted their strategies steadily, including those in the Value Creation category, which aims for improvement of profitability through value additions and efficiency enhancements; the Steady Business Growth category, which aims at growing earning pillars through expansion of business scales; and the Seeding category, which aims to grow new earning pillars through the cultivation of next-generation business. Also, when pursuing the Business Portfolio SHIFT, we have particularly incorporated the perspective of digitization and sustainability, to build a business portfolio that can evolve and grow together with the society.

Strengths of the domestic real estate business

The domestic real estate business offers high capital efficiency.

Sumitomo Corporation traces its roots back to the Osaka North Harbour Company Limited, a real estate developer founded in 1919. Later, as we developed into an integrated trading company, we expanded the reach of the founding businesses of real estate to include office buildings, residences, retail facilities, funds and REITs, build-to-suit (BTS) development, and logistics facilities. During this process, we have evolved into an integrated developer with an extensive lineup of services and solutions covering nearly every corner of the real estate business.

Today, our real estate business includes leasing where we own and manage a property after development (office buildings, retail facilities, etc.), development and sales targeting capital gains (condominiums, logistics facilities, etc.), and asset management (funds and REITs) headed up by our wholly owned subsidiary Sumitomo Realty Management Co., Ltd. (SRM).

The strengths of the Sumitomo Corporation Group’s real estate business include a portfolio resilient against changes in the external environment built atop a balance of these segments, hands-on advanced planning and development capabilities honed since our foundation, and synergies generated through cross-functional collaboration within the Group. We are maximizing these strengths to steadily and efficiently grow earnings.

Strengths of Sumitomo Corporation’s Domestic Real Estate Business

1. Risk resilience using diversified portfolio
2. Hands-on advanced planning and development capabilities
3. Collective strengths of the Sumitomo Corporation Group (collaboration with SMFLMP*)

Further enhancing an earning pillar

Further promotion of the Steady Business Growth category

Increasing high-value-added assets and shifting to a more efficient asset portfolio

Changes in the business environment are expected to continue in the future. These include changes in work and offices due to the COVID-19 pandemic, raising demand for logistics facilities amid the growth in e-commerce, and increasing demand for high-quality, high-environmental-performance real estate amid growing awareness of ESG.

To capture business opportunities associated with such changes, we are looking to increase our portfolio of high-value-added and quality assets in an effort to shift our portfolio toward more efficient assets. This will involve promoting the development of new asset classes with medium- to long-term growth potential, such as student apartments and senior residences, and considering entering the data center business. In this process, we will increase SRM’s assets under management (AUM) and actively promote collaboration with Sumitomo Mitsui Finance and Leasing Co., Ltd. (SMFL; 50% joint venture). Through these initiatives, we bring AUM, profits, and assets to another level in demonstrating our commitment to the steady growth of the real estate business in the Steady Business Growth category.

SRM AUM

Goals for the Domestic Real Estate SBU at the end of the medium-term management plan

Profits: Approx. ¥45 billion
Assets: Over ¥700 billion
SRM AUM: ¥800 billion

Aiming for sustainable and vibrant community development

Kazuki Shimogaito
Business Promotion Team 1, Building Business Dept.

Currently, I work in the Building Business Department, where I primarily manage existing large office buildings and develop new buildings. My work provides me with a sense of accomplishment. Sumitomo Corporation’s real estate business is promoting a number of initiatives based on the recognition that environment-friendly community development is a clear issue of the future. I’m in charge of the Sumitomo Corporation Takebashi Building, where we shifted to 100% renewable power in 2021 supplied from Sumitomo Energy Corporation as part of our commitment to the environment and to help lower the community’s carbon footprint. I will continue working daily to achieve environment-friendly community development that creates new value while being closely in tune with the DNA of each community.
Review of our tire business

TBC faced difficulties in fulfilling its potential

TBC Corporation is a tire distributor in the United States engaged in both tire wholesale and retail. At the time Sumitomo Corporation acquired all of its shares in 2005, TBC had the largest number of retail outlets in the United States next to chains directly owned by manufacturers. Following the acquisition, TBC steadily improved its earnings, posting record-high profit in 2011. Starting in 2012, however, TBC saw earnings decline mainly in the retail segment for six years. During this time, we turned over TBC’s management team and successfully restructured its retail business, but TBC still fell short of a full-fledged recovery in earnings and return to a growth trajectory.

At the same time, to fully restructure TBC’s core wholesale business, we made the bold decision in 2018 to sell 50% of TBC’s shares to Michelin, the world’s second-largest tire manufacturer. Michelin excels at digital-driven advanced logistics and capturing demand from the growing corporate fleet vehicle market, not to mention that it’s a top tire brand. Merging the supply chain and customer base of TBC, with its strengths in low-priced tires and private brands, with Michelin made it possible to build an effective and mutually beneficial relationship. As a result, TBC expanded its industry-leading scale and product lineup and established the foundation to become the dominant player in tire wholesale.

However, organic synergies failed to materialize and with a lack of results even three years after the merger, we talked on a number of occasions with Michelin to find a breakthrough, ultimately deciding to revamp TBC’s management structure. Until then, we had supported TBC as a shareholder by entrusting operations to the local management team, but we decided to speed up the reorganization by dispatching executive officers from Sumitomo Corporation and Michelin. Michelin appointed a member of its Group Executive Committee as CEO, and we appointed a business division’s general manager as CAO. Furthermore, a Management Council was established, including a full-time CFO with experience leading cost cutting locally. TBC’s Board of Directors, comprised of only shareholders, and the Management Council worked closely together, to increase the quality of and speed up execution by dividing roles and duties among Management Council members. Under this new management structure, we looked back at the history of management and faced underlying problems thoroughly.

Value creation measures

Revamped management structure and ushered in structural reforms

To maximize TBC’s strengths with its industry-leading foundation, the first order of business for the new management team was to reform TBC’s corporate culture. Positioning the Executive Committee as a venue to pursue companywide optimization, the team decided to make proposals and decisions on personnel affairs, marketing, purchasing, ordering, real estate contracts, system development, and others, which had previously been entrusted to each department, at the monthly Executive Officers’ Meeting. The team also worked to improve engagement with officers and employees by actively disclosing companywide performance and issues through town hall meetings and video messages as well as building a system to encourage employees to share their opinions and proposals, through Pulse Survey, for example. Based on a customer-centric philosophy, we transformed forums for dialogue with suppliers, sales partners, and franchisees, which had previously focused on the topic of short-term transactions, into an opportunity for management teams on both sides to understand each other’s medium- to long-term strategies.

These corporate culture reforms formed the foundation for the transformation of TBC’s financial and earnings structures. The thorough pursuit of companywide optimization helped to integrate the supply chain across department lines, increasing productivity as well as eliminating redundancies in order placement and purchasing, which increased negotiating power. The turnover rate among employees declined as engagement improved employee satisfaction, helping to lower recruiting and training costs. Furthermore, the customer-centric philosophy established trust, increasing the number of customers accepting price hikes or reduced discounting in times of rising costs, which greatly improved profits. As a result, TBC’s operating profit for FY2021 reached its highest level since the acquisition.

Looking ahead, TBC’s management team and shareholders will fulfill their roles and responsibilities, along with deepening dialogue and collaboration with one another, as the company wraps up its restructuring. The key to this process will be the following six initiatives. The ultimate vision is for TBC to provide indispensable solutions to the entire North American tire industry.

1. Pursue scale
2. Identify key customers
3. Focus on attractive product segments
4. Differentiate services
5. Improve operating processes with digital innovation
6. Continue corporate culture reforms

Promoting value creation under the slogan “One TBC”

Shinichi Kato
Managing Executive Officer, Sumitomo Corporation
Chief Administrative Officer, TBC Corporation

TBC’s business structure was unable to translate industry-leading scale and coverage into competitiveness and customer satisfaction. The root cause was the company’s partial optimization and passive corporate culture. I teamed up with the CEO dispatched by Michelin to make a breakthrough.

As an example, we integrated the company’s decentralized and inconsistent systems and supply chain to visualize and share information on inventories across department lines. As a result, despite ongoing personnel shortages on the front line, we increased productivity and customer satisfaction, enabling cost savings and reducing discounting. In the face of products being out of stock and delivery delays caused by worldwide logistics disruptions, we managed to minimize opportunity loss by using inventory on hand internally and successfully doubled our earnings power over the past year.

These results have given a boost of confidence to employees. Drawing upon their proposal and execution capabilities, we will continue to lower the break-even point and improve inventory turnover, and thoroughly promote selection and concentration of our businesses.
Focus

Business reform through DX

Q. What part does DX play in SHIFT 2023?
A. DX and sustainability are two major themes in society that have a significant impact on our business portfolio. DX is a powerful tool for achieving the goals of SHIFT 2023. As an integrated trading and business investment company, we are in a position to identify issues that various industries face as well as to discover and implement solutions and ways to address those issues. Our strength is that we are able to ascertain the true nature of the issues from both macro and micro perspectives and then provide comprehensive solutions while implementing digital technologies and utilizing data. Leveraging this strength, we will contribute to the cultivation of next-generation core businesses from a medium- to long-term view and to improving overall profitability of the Group through enhancement of existing businesses utilizing DX.

Toshikazu Nambu
Representative Director,
Executive Vice President,
Chief Digital Officer

Q. How do you plan to promote your DX strategy?
A. We have formed a professional group that understands the business and are promoting the strategy in close contact with business work sites. With our IT tool, “SC Digital Platform” and human support for digitalization as a common foundation, we will not only promote digitalization such as robotic process automation (RPA) for improving the efficiency of existing operations, but also carry out measures to enhance the business models and judgment of existing businesses to improve our DX implementation capabilities. Currently, we are concentrating our resources on businesses with impact that will bring about social implementation and reform and supporting business innovation and value improvement to tie this into the portfolio shift of SHIFT 2023.

Q. As many companies put DX into their strategies, there seems to be a shortage of human resources to implement it. Please tell us about your organizational structure and training of DX professionals.
A. We launched our DX Center in 2018 as a cross-functional organization. Over the past four years, we have gone from 15 to approximately 150 members worldwide. To promote DX, it is important to train human resources who understand not only the technology, but also management, the industry, and are capable of creating businesses, so we are working continually toward that end at business work sites and through training and other efforts. In addition to establishing DX Centers in four overseas regions and strengthening the organizational structure while hiring professionals, our operations are uniquely integrated with specialized teams, including Insight Edge, Inc., which is a DX technology subsidiary, SC Digital Media K.K., which provides data marketing functions, and SCSK Corporation, which is in charge of developing digital solutions and integrated operations. Another distinctive characteristic of the Company is that we have a global corporate venture capital (CVC) network. Including Presidio Ventures, Inc., which was established in 1998, we currently have five global bases of operations (the others being Hong Kong/Shanghai, Tel Aviv, London, and Tokyo). They serve as our so-called “eyes” and “ears” for cultivating new businesses and business models, such as cutting-edge technologies possessed by start-ups, as they will utilize digital technology and data to reform business operations with large scale with social impact. In addition, by providing packaged DX solutions, we will seek to build a flexible organization for supporting our customers in everything from improving profitability to structural and corporate culture reform.

K.K., which provides data marketing functions, and SCSK Corporation, which is in charge of developing digital solutions and integrated operations. Another distinctive characteristic of the Company is that we have a global corporate venture capital (CVC) network. Including Presidio Ventures, Inc., which was established in 1998, we currently have five global bases of operations (the others being Hong Kong/Shanghai, Tel Aviv, London, and Tokyo). They serve as our so-called “eyes” and “ears” for cultivating new businesses and business models, such as cutting-edge technologies possessed by start-ups, as they will utilize digital technology and data to reform business operations with large scale with social impact. In addition, by providing packaged DX solutions, we will seek to build a flexible organization for supporting our customers in everything from improving profitability to structural and corporate culture reform.

Q. What kind of progress has been made over the past four years or so since DX initiatives were launched in earnest?
A. There are currently around 300 DX projects moving forward companywide, and approximately 30% of these are efforts aimed at business model reform. The SBUs, which are where the implementation takes place, have taken ownership to move forward on the quantitative and qualitative targets that have been set. The DX Centers work closely with the SBUs on improving cost effectiveness while monitoring the status. We hope to make further advances and refine the operations going forward.

Q. As ESG management gains traction, how do you think DX and ESG intersect?
A. There are three axes to the value we provide through DX: The first is operational value, whereby we automate and optimize various operations by changing data into business value, including optimization of inventory and streamlining of operations. The second is customer value in which we provide solutions to bring about reform in customer contact points and B2B business models. The third is social value, which leads to social change on a grand scale through the utilization of data and mechanisms to help resolve social issues including climate change. In regard to social value in particular, we are working on visualization of carbon management and launched a new green transformation (GX) management service in April 2022. Building on this, we will further accelerate our ESG management initiatives.

Q. Lastly, can you tell us about your outlook for the future?
A. We will leverage the DX knowledge we have cultivated to accelerate the Business Portfolio SHIFT of the Group and actively provide solutions to our customers. As a partner providing integrated solutions based on DX, in other words, “digital solutions integrated trading and business investment company,” we will utilize digital technology and data to reform business internally and externally, thereby creating value on a large scale with social impact. In addition, by providing packaged DX solutions, we will seek to build a flexible organization for supporting our customers in everything from improving profitability to structural and corporate culture reform.
DX Example 1  Digitization

Realizing substantial reduction of time spent on operations and improving employee IT literacy

Robotic process automation (RPA) refers to automation of operations using robots. The Sumitomo Corporation Group launched full-scale groupwide promotion of RPA led by DX Centers in FY2018, believing that RPA would lead to advancement of existing businesses and development of new ones with the extra time it would free up. In collaboration with group company SCSK, a leading IT solutions provider, we put together a development system to actively promote the sharing of knowledge between group companies. As a result, 100,000 hours of operations were cut in FY2019, 200,000 in FY2020, and 440,000 in FY2021. In qualitative terms, we have seen an improvement in the IT literacy of individual employees and increased awareness of operational improvement utilizing digital technologies through the introduction of RPA. Moreover, we have recognized secondary benefits such as expansion of our business scope and promotion of full-scale DX initiatives. We will continue to promote improvement and advancement of groupwide operations through the introduction of RPA.

Three measures to promote RPA

1. Preparation of development system (external/internal)
2. Development of versatile RPA that can be used companywide
3. Sharing of knowledge between companies within the Sumitomo Corporation Group

DX Example 2  Advancement of Existing Businesses

Promoting advancement of operations and improvement of asset efficiency through in-house DX

The construction equipment rental business in North America and Asia is one of our key businesses for further expanding profits. We have long considered IT to be a key business strategy topic, and since FY2021 we have been promoting further improvements to operational and asset efficiency through collaborations with DX Center and Insight Edge. In the construction equipment rental business, delivery times and turnover of delivery trucks are greatly impacted by combinations of equipment load and what order or route is selected for delivery and pickup. By optimizing these constraints through data analysis, we will strive to improve asset efficiency and increase customer satisfaction, thereby further strengthening the competitiveness of our business. We will also utilize the expertise we accumulate through these efforts for other businesses and tie it into improving corporate value groupwide.

DX Example 3  Industry Reform

Supporting the reduction of corporate GHG emissions and contributing to the realization of carbon neutrality

Climate change is a global issue that requires action that transcends borders. Companies are expected to enhance their disclosure of information on risks and opportunities related to climate change as well as help resolve this issue through their business. However, there are many that have not been able to keep track of their own greenhouse gas (GHG) emissions and thus are unable to set targets or take specific actions to reduce their emissions. In response to this need, Sumitomo Corporation launched a GX (Green Transformation) Concierge service in April 2022 to provide support for preparing a plan and road map for simply and efficiently tracking GHG emissions and reducing them. There have been few other services providing integrated support up to preparation of a GHG emissions reduction plan. Our aim is to roll the service out to 1,000 locations of 100 companies in Japan by FY2023 to contribute to promoting carbon neutrality.

DX Example 4  Social Implementation and Reform

Developing a DX enabler business for the manufacturing industry and resolving industrywide problems

We launched a one-stop DX enabler business for the manufacturing industry in April 2022. This service includes everything from identifying the issues facing manufacturers to proposing digital solutions and consulting to resolve those issues. First, we will provide the service to Japanese manufacturers facing issues common to the industry from an office in Thang Long Industrial Park, which we operate in Vietnam. This is a service that only an integrated trading company could provide. In addition to the knowledge we have accumulated by promoting DX for manufacturing sites, we take advantage of expertise in the digital service provision of group company SCSK and our contact point with Japanese manufacturers in Southeast Asia that have set up operations in our industrial parks. In FY2023, we will launch the business in earnest, and aim to provide the service throughout Southeast Asia in the future.

DX Example 5  Industry Reform

Realizing substantial reduction of time spent on operations and improving employee IT literacy

Robotic process automation (RPA) refers to automation of operations using robots. The Sumitomo Corporation Group launched full-scale groupwide promotion of RPA led by DX Centers in FY2018, believing that RPA would lead to advancement of existing businesses and development of new ones with the extra time it would free up. In collaboration with group company SCSK, a leading IT solutions provider, we put together a development system to actively promote the sharing of knowledge between group companies. As a result, 100,000 hours of operations were cut in FY2019, 200,000 in FY2020, and 440,000 in FY2021. In qualitative terms, we have seen an improvement in the IT literacy of individual employees and increased awareness of operational improvement utilizing digital technologies through the introduction of RPA. Moreover, we have recognized secondary benefits such as expansion of our business scope and promotion of full-scale DX initiatives. We will continue to promote improvement and advancement of groupwide operations through the introduction of RPA.
Focus

Evolving HR management for sustainable development

Top-Tier Professionals at Sumitomo Corporation

Numbering approximately 74,000 people, our Group’s diverse talent is the most important management capital when it comes to continuously creating new value in order to enrich society and people’s lives. They play the leading role in these efforts. Maintaining and strengthening our human capital as well as enhancing the pool of human resources is the responsibility of management.

Sumitomo’s Business Philosophy, which has been cultivated over the 400-year history of Sumitomo, has been handed down to our people in unbroken succession from their predecessors. The philosophy places an emphasis on trust, having an enterprising spirit for pursuing value creation and continually innovating the business while quickly and accurately responding to social changes, and upholding a grand design that emphasizes value creation with a long-term perspective rather than seeking short-term gain. On the global stage, our talent—who share and embody this abiding belief—take on the challenge of value creation for a new era, utilizing the well-rounded management base and diverse business functions that we have built up over a span of more than a century. It is they who are the Top-Tier Professionals unique to Sumitomo Corporation.

Changes in the business environment and the skill sets required

We have transformed our business to meet economic and social needs that change with the times. It is our Top-Tier Professionals in various domains that have driven this transformation, expanding the horizons of our business while acquiring new skill sets in keeping with the times.

Today, the business environment surrounding us is shifting even further. The international situation is marked by increasing uncertainty, digital technology is evolving at an accelerating pace, and there is increasing social demand to resolve key social issues such as climate change, a circular economy, and respect for human rights. We are required now to demonstrate an enterprising spirit and create businesses for a new era while quickly adapting to these changes, and it is essential that we upgrade our skill sets accordingly.

In addition, we are promoting dialogue and coordination to encourage Jiritsu management among group companies to enhance group management. As such, we must acquire more advanced skills when it comes to management, governance, and supporting the growth of group companies.

Moreover, as career trajectories diversify and there is a need to develop a diverse group of professionals, I believe a system that will facilitate the autonomous career development of each of our employees is a must.

Expanding the pool of Top-Tier Professionals

We introduced a new human resources system to embody our Global HR Management Policy, which sets forth our basic approach to HR management. We are promoting reform of HR management based on the concepts of “Pay for Job, Pay for Performance” and “Development of Top-Tier Professionals,” while also positioning the enhancement of HR management as one of the core management strategies under SHIFT 2023. In April 2021, we abolished seniority-based management, introduced a job grading system, and renewed our evaluation and compensation systems. Moreover, in April 2022 we expanded the scope of the job grading system to include those who are re-employed after retirement and eliminated conventional career groups (“Professional” and “Clerical”) to unify career tracks, thereby establishing a system allowing all employees to play an active role without getting hung up on the old framework.

We will continue increasing the effectiveness of operations under these new systems, while at the same time continue to diversify recruiting methods, enhance people management skills, and implement HR development measures to develop potential successors for key leadership roles in order to enhance our pool of Top-Tier Professionals.

I believe that through the promotion of this HR management reform, each officer and employee will reach their potential and experience growth, thereby evolving higher engagement, which will lead to improvement of the Group’s competitiveness and corporate value. Starting in 2022, we are conducting an engagement survey, and while checking the effects of and progress on various measures, we are working to realize the goal of “building a Great Place to Work” as set forth in the policy.

In addition, we will continue to promote Diversity and Inclusion (D&I) as the core enabler for the Group’s value creation, innovation, and competitiveness. In Japan, we are focused on the promotion of women’s advancement in particular, and have disclosed quantitative targets for 2030 as a waypost for achieving our vision. These targets are not something that can be easily achieved as an extension of our previous efforts. We will implement various measures, including recruiting and training, to accelerate our efforts to achieve them. By promoting the elimination of any barriers to D&I and actively recruiting talent possessing diverse experience and career backgrounds, going beyond differences in attributes such as age, gender, and nationality, we will bring together diverse knowledge, which will strengthen the organization and increase corporate value.

Further enhancing the link between the growth strategy and the human resources strategy

Under SHIFT 2023, we are steadily working on KPIs and KAs established at the SBU level and coming together as a group to achieve our goals, including the Business Portfolio SHIFT. We introduced evaluations based on the progress of strategy execution as a measure to enhance organizational commitment to accomplishing this strategy. Under this system, progress toward achievement of the KPIs and KAs is evaluated, taking into account both importance and difficulty, and by reflecting this in individual bonuses, we aim to cultivate a results-oriented corporate culture and achieve both individual and organizational growth.

We are also promoting optimal allocation of talent according to the Business Portfolio SHIFT. Over the three-year period until FY2023, we plan to reallocate approximately 180 employees across business units. We already completed roughly two-thirds of the shift in FY2021, the first year of the plan.

These important HR management policies, strategies, and measures are discussed at meetings of the Management Council and the HR Management System Committee, which is an advisory body to the Management Council. The Board of Directors defines directions and engages in supervision and monitoring accordingly.

In addition, we established the Talent Management Task Force, which is in charge of enhancing governance at group companies and improving management evaluation, compensation, and succession. We introduced an investment performance-linked compensation plan to increase the probability of successful business investment with the aim of enhancing the performance of business investments.

Our human capital is key to the sustainable growth of the Group. We will promote active disclosure of human capital to investors and other stakeholders and further dialogue with them as we work on further enhancing HR management.

Takayuki Seishima
Representative Director, Senior Managing Executive Officer, Chief Administration Officer and Chief Compliance Officer
Creating new value for today and tomorrow

Global Human Resources Management Policy

Vision for SC People

Top-Tier Professionalism

The Sumitomo Corporation Group aims to be a group of individuals who share the Group’s vision and mission, maintain high aspirations and continuous (ongoing) motivation with an enterprising spirit, and create new value on a global scale.

Vision for SC Organization

Great Place to Work

The Sumitomo Corporation Group seeks to build a great place to work, where individuals continually and passionately create new value. We aim to be an organization recognized for nurturing talent that continually takes on new challenges throughout the world.

Right talent to the right assignments

Focus:
Evolving HR management for sustainable development

Human resources will drive the creation of new value, maximizing the performance of SC People and SC Organization to achieve that vision.

In response to these changes, we have set forth a vision for employees (SC People) and companies (SC Organization) in a new era within our Global HR Management Policy. Based on the concepts of expanding Top-Tier Professionals, implementing thorough “Pay for Job, Pay for Performance,” and enhancing people management skills, we are striving to establish a work environment and workplace culture to serve as a foundation for growth and to improve the HR management cycle of recruitment, development, right talent to the right assignments, performance management, and fair treatment.

Our vision for individuals and organizations is to provide a place where highly motivated talent can realize autonomous growth and self-realization and for their passion in taking on challenges to become the driving force for organizational growth and value creation, with that cycle, in turn, attracting further Top-Tier Professionals to enrich our reservoir of human capital.

The roughly 74,000 people that make up the Group’s diverse human resources will drive the creation of new value, maximizing the performance of SC People and SC Organization to achieve that vision.

Recipe

Reactivity

Efficiency

Performance

Recruitment

Diversification of recruiting methods
- Enhancing mid-career hiring at each level in addition to recruiting new graduates for the purpose of addressing changes in the business environment and improving diversity
- Expansion of reach to various candidates from junior-level employees to management-level candidates (by direct sourcing, etc.)
- Utilization of alumni networks

Development

Sumisho Business College (off-the-job training program)
- Off-the-job training programs provide opportunities to acquire broad-based business knowledge and skills along with insight
- Number of courses: 301 (FY2021)
- Total training time for all employees: 65,083 hours (FY2021)

Development of managerial talent
- Developing talent who understand and embody Sumisho’s Business Philosophy, can take charge of business management, and can work with the management of group companies through diverse practical experience (on-the-job training) and long-term training programs for selected employees (off-the-job training)
- Long-term selection training participants: 84 (FY2021)

Overseas training program
- Dispatching MBA, overseas, and language trainees
- Number of dispatched employees: 76 (FY2021)
- Number of destination countries: 22 (FY2021)

Performance management

Fair treatment

Individual perspective

Organizational perspective

Right talent to the right assignments

Introduction of a job grading system

(April 2021)

Grades are determined according to the significance of duties. Seniority-based promotion has been eliminated. The job grading system creates a foundation for promoting flexible and optimal assignment of the right talent to the right assignments.

In FY2022, the scope will be expanded to those re-employed after retirement.

Shift of human resources

Selfishly and flexibly reassigning human resources according to the Business Portfolio SHIFT, taking into account individual aptitude and preferences
- Approximately 100 employees to be reassigned under SHIFT 2021 (3 years)
- Nearly two-thirds of the shift of human resources was completed in the first year (FY2021)

Performance management

Fair treatment

Reform of evaluation system

(April 2021)

• Absolute evaluation/360-degree evaluation
  Shift to an effective evaluation system focused on diverse individuals
• Evaluation based on the progress of strategy execution:
  Reflecting progress on SBU strategy execution in compensation
• Investment performance-linked compensation:
  Compensation that reflects the performance of new, large-scale investments

Inheritance of Sumitomo’s Business Philosophy

Conducting training annually at Besshi Copper Mine (predecessor to Sumitomo Corporation)
- All employees learn the history of Besshi Copper Mine
  (Messages from management, various training/employee roundtables, etc.)

Acceleration of Diversity & Inclusion (D&I)

Rolling out measures positioning D&I as a source of competitiveness globally. In Japan, women’s empowerment is regarded as a priority issue and measures are implemented with numerical targets.
- Establishment of a succession plan
  (Facilitation of systematic training and promotion from a mid-career to long-term perspective)
- Holding of Diversity Weeks (March 2022)

Remote work/Super flextime system introduced in 2018
- Approximately 1,000 employees in FY2021

Employee roundtable
- Conducting roundtable with employees, managers, and D&I committee members

Health and productivity management

Rolling out various measures based on the belief that physical and mental health are of utmost importance for individuals to achieve their full potential
- Selection of “White SBI” enterprise with outstanding health and productivity management for the sixth consecutive year since 2017

Workstyle reform

Remote work/Super flextime system introduced in 2018
- Received the Excellence Prize of the Minister of Health, Labour and Welfare’s awards for enterprises that promote telecommuting (Brilliant Telework Prize) in FY2020

Workstyle reform

0 to 1 Challenge
- In-house entrepreneurship program aimed at creating new businesses, developing human resources, and fostering a culture of taking on challenges
- Number of entries in FY2021: 123
Selective investment & strengthening of post-investment value creation

Strengthen investment risk management framework and promote proper evaluation of investments and improvement of value

We have adopted a unified framework that covers everything from the entry into the investment to the exit and that takes into account changes in the portfolio as a whole, as well as the nature of the risks involved in each individual investment opportunity, while reviewing the process for assessing and following up investment projects as appropriate.

When assessing investment projects, the investment theme is clarified at the initial stage of the process and is verified as a key point of due diligence. In addition, by applying a discount rate appropriate to each business risk, we are able to calculate an “appropriate price” for the investment and evaluate the opportunity from both quantitative and qualitative aspects.

Our business unit investment committees or the company investment committee meets at each stage of consideration and implementation, depending on the scale and importance of the project. From an early stage, these committees conduct in-depth discussions regarding the strategic positioning of the project, the background to and the reasoning behind the selection of the project, ESG, and the various factors that may affect the success of the investment.

In addition, we have developed and strengthened a system that helps prevent repeating past regret at each stage of the investment process. Specifically, we will increase the value of each business by steadily implementing measures, including establishment of strict investment discipline for selecting investments, development of an optimal governance structure for increasing the value of each business after investment, and investing the right resources at the right time. Furthermore, to increase our commitment to value creation, we introduced a new compensation system linked to investment performance in 2021. Stepping up our monitoring efforts, we will set a clear time frame and make improvements to investments that do not increase in value as expected. If improvement is not expected, we will continue to engage in thorough asset recycling.

### Investment Risk Management Framework

**Phase I Consideration of project—Execution of investment**

**Selection/consideration of investments**

- Deliberation by consideration stage committee
  - Confirmation of consistency with strategy
  - Clarification of investment thesis
  - Confirmation of validity of hypothesis in implementing the relevant investment thesis
  - Confirmation of target level of return
  - Discussion of significant risks and countermeasures

**Decision-making and execution**

- Deliberation by execution stage committee
  - Confirmation of adequateness of stand-alone value, synergies, and full value
  - Analysis of downside scenarios
  - Discussion of countermeasures to deal with significant risks
  - Formulation of proposals for governance/monitoring system

**Phase II Post-investment follow-up**

**Drawing up, execution, and regular review of the 100-day plan**

- Development of management infrastructure including governance system
- Setting and monitoring of optimal KPIs
- Drawing up of revised medium-term plan

**Business management**

- Monitoring and countermeasures revision

**Monitoring of investment performance and support for execution (Full Potential Plan)**

- Identification and evaluation of management status based on quantitative criteria
- Investments judged to have further potential
- Draft and execute concrete strategy to maximize business value of investments; withdrawal from investments with limited growth potential

**Thorough implementation of the Full Potential Plan**

- Work on a sound investment portfolio with a clear time frame and thoroughly implement asset recycling
- Mostly completed the turnaround plan and exited from 32 of the 60 companies subject to exit or divestment (FY2021)

**Key Points to Enhance in Medium-Term Management Plan SHIFT 2023**

- Through dialogue with group companies, carry out regular monitoring from the viewpoint of the environment, human rights, labor management, the supply chain, and other aspects
- Check management situation against laws and regulations as well as international standards based on business characteristics when conducting internal audits
- Consider improvements according to business characteristics if issues are discovered through group governance or internal audits
- Work on improvements while engaging in dialogue and discussion if there are concerns or requests from local residents, non-governmental organizations (NGOs), or others
Short- to Medium-Term Growth Strategy
Enhancement of group governance

Promoting maximization of corporate value based on the Group Management Policy

The Sumitomo Corporation Group consists of 893 companies in 79 countries and regions. These companies are the source of the Group’s strength. Their business domains fall under a wide range of industrial fields, and many of them are industry leaders.

The group companies respect the Sumitomo Corporation Group’s Corporate Mission Statement and management strategies, and engage in Jiritsu* management. Our approach to group management is to contribute to important decision-making at Board and other meetings through active dialogue based on relationships of trust as a shareholder, and to create new value through collaboration among group companies including Sumitomo Corporation. For the purpose of sharing and better implementing this basic approach and policies within the Group, we established the Group Management Policy (GMP) in 2021.

The GMP clarifies the roles and responsibilities in group management, setting forth the three principles of Jiritsu, dialogue, and collaboration to be respected by Sumitomo Corporation and its group companies.

The values set forth in the Sumitomo Corporation Group’s Corporate Mission Statement and the GMP are shared and implemented within the Group. This allows us to swiftly and appropriately respond to industry structural transformation and trends surrounding sustainability and to grow our group companies into future earnings pillars, thereby further solidifying the Group’s business portfolio and maximizing corporate value.

* Jiritsu is a Japanese term. In the GMP, we define it to mean “Following the rules necessary for the management of a Sumitomo Corporation Group company, such as the Sumitomo Corporation Group’s management principles, strategies, and policies, to discipline oneself, to think, make decisions, act for oneself in order to achieve goals, and to be accountable to stakeholders.”

The values set forth in the GMP include:

- Promotion of maximization of corporate value
- Enhancement of group governance
- Promotion of group growth strategies and talent management

The values set forth in the GMP are shared and implemented within the Group. This allows us to swiftly and appropriately respond to industry structural transformation and trends surrounding sustainability and to grow our group companies into future earnings pillars, thereby further solidifying the Group’s business portfolio and maximizing corporate value.

Three principles of the GMP

**Jiritsu**

On a foundation of respect for the management principles and strategy of the Group, our group companies build and execute their own business strategies and plans. With management based on the Jiritsu mindset as a foundation, each group company adopts a management system appropriate to its circumstances.

**Dialogue**

We build trust-based relationships through active dialogue with and among our Group companies. Relying on the strength of these relationships, Sumitomo Corporation acts through directors at each group company to maintain involvement in important decision-making and to monitor business performance, providing advice where appropriate.

**Collaboration**

We work together to make the most of the diverse management resources within the Group, realizing new value that would not be possible by working alone.

Aimo Park: An example of group management

Parking operations contributing to the mobility society of the future

The percentage of people living in metropolitan areas is increasing every year, and it is said that by 2050 approximately 70% of the global population will be concentrated in cities. With this urbanization, traffic congestion, air pollution, lack of parking, and other issues have become social issues. In addition, realizing carbon neutrality by eliminating overall greenhouse gas emissions in order to resolve the issue of climate change has become a challenge for society as a whole.

Under these circumstances, parking spaces, which are a part of the social infrastructure, are expected to play an important role in the mobility society of the future. This includes support for promoting use of EVs through the installation of charging equipment and promotion of a sharing economy through their utilization as car sharing hubs.

In 2019, Sumitomo Corporation acquired all shares of Aimo Park, Northern Europe’s largest parking lot operation company, which manages roughly 7,000 locations in three Northern European countries with around 400,000 spaces.

Implementing Jiritsu, dialogue, and collaboration to realize improvement of corporate value

Through active dialogue and collaboration between Sumitomo Corporation and group company Aimo Park at meetings of the Board of Directors and promotion of its Jiritsu-style management, we aim to strengthen the business foundation and create new value, thereby contributing widely to a mobility society. We have invited three local people from various fields with a wealth of experience in corporate governance to become Outside Directors, which comprise about half of the Board of Directors, to ensure diversity and expertise in Board operations.

At meetings of the Board of Directors, these diverse members take time to discuss not only immediate management issues but also medium- to long-term subjects for value creation, such as transformation, growth strategies, and talent management, in light of Aimo Park’s vision and mission. They provide the group company with constructive advice and feedback on issues.

Moreover, in promoting the business, we are working to earn the trust of stakeholders such as local governments, real estate companies, and parking lot users while utilizing the Group’s knowledge and proposal capabilities related to mobility, DX, real estate, and energy management and promoting close collaboration. Aimo Park’s management and Board of Directors and Sumitomo Corporation will continue to fully leverage their functions and fulfill their responsibilities in their respective positions to improve corporate value.

Aimo Park, Northern Europe’s largest parking lot operation company

**Main business**  Operation and management of mostly off-street parking facilities

**Main locations**

- Stockholm (Sweden)
- Oslo (Norway)
- Helsinki (Finland)

**Vision**
To be the most attractive mobility partner, striving to stay ahead, create value and contribute to society.

**Mission**
Enriching everyday life of people through smart parking and mobility solutions.
